## The Breast Health Clinic at SCCA

The Breast Health Clinic provides prompt evaluation of abnormal mammograms, breast lumps, nipple discharge, or breast and other breast complications.

The clinic is staffed by breast specialists. To provide a diagnosis and treatment plan, our providers may incorporate the results of several studies:

- Physical examination
- Mammography
- Breast ultrasound, and if necessary
- Fine-needle aspiration
- Core biopsies and
- MRI

This close integration of the clinical evaluation with breast Imaging studies ensure that patients receive a thorough evaluation and accurate diagnosis.

For women with an increased risk for breast cancer, the Breast Health Clinic staff provides an individualized screening and follow-up plan to optimize early detection of breast cancer.

What you can expect

- To discuss pertinent breast imaging tests, such as mammography, ultrasound, and MRI (magnetic resonance imaging) with your provider.
- A clinical breast exam by an experienced clinician.
- When indicated, minor procedures such as needle sampling or biopsy.
- Pre and Post operative care for patients requiring surgical intervention.
- Appropriate follow-up care directed by your provider.
- Recommendation for a comprehensive individualized screening program.
- Referrals, as appropriate, for genetic screening.
